

Reduce backup windows for multi-server environments with Dell EMC Integrated Data Protection Appliance

With environments consisting of 500 VMs, a large Oracle® database, and a Microsoft SQL Server database, we simulated a seven-day backup scenario using

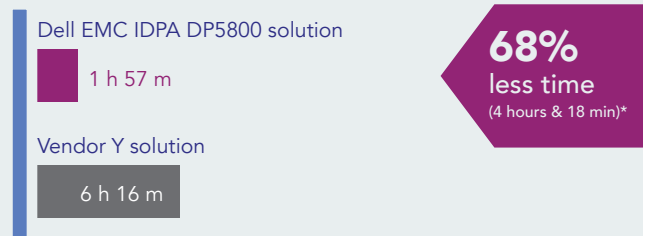

- ▶ A Dell EMC™ Integrated Data Protection Appliance (IDPA) DP5800-based solution
- ▶ A similarly sized solution from a competitor we call "Vendor Y"

The Dell EMC IDPA solution can allow you to set shorter backup windows and resume business operations sooner.

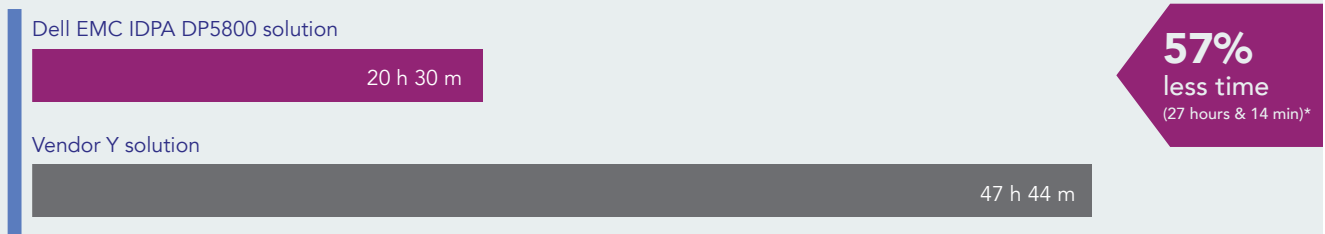

Time to back up 500 VMs and two large databases for day 1 (full backup)

Average time to complete daily backups for 500 VMs and two large databases after daily updates

Total time to complete seven simulated days of backups for 500 VMs and two large databases

Read our full report to learn more about how the smaller backup windows you get with the Dell EMC IDPA can help your company:

Maintain operational continuity

Mitigate risk

Reduce recovery point objectives (RPOs) and recover data from a point prior to an event
