

IT deployment tailored to task

ProDeploy Flex

All deployments are not equal. When business needs demand greater versatility, ProDeploy Flex delivers deployment tailored to task. It features flexible delivery methods for hardware and/or software with field, factory and remote choices, plus specific features to deliver technology solutions with multivendor networking and applications for Edge and AI and more.

Selectable features tailor deployment

Choose from a list of selectable features to meet your specific deployment challenges. Options for: deploying to a remote place, delivery outside of metro areas, or locations that require special protocols, ProDeploy Flex can accommodate your requirements. ProDeploy Flex also provides options to install third-party applications for Edge and AI along with Dell NativeEdge.

Factory configuration and rack integration

When rapid expansion is critical to business growth, receive your servers racked and configured from our facility, ready to roll in place. Our engineers will work with you on rack layout, cooling and optimizing a repeatable build.

Flexible delivery with modular, standard features

Benefits

- Blend factory, remote and onsite service delivery methods to achieve your preferred experience
- Selectable features built for challenging locations and more
- Deploy multivendor networking from leading manufacturers
- Installation of innovative Edge and GenAI applications from third party ISVs
- Built to deploy Dell NativeEdge platforms

The easy way to adapt deployment to your needs

Step 1: Choose your deployment methodology best for your project

Factory Deployment

Receive technology configured or configured and racked – ready to install. Great for adding compute power consistently over time, data center refreshes or delivery of GenAI servers.

Field Deployment

Choose to have either hardware or software or both installed onsite at your location with expert methods honed over 35 years in deployment.

Remote Deployment

Choose either remote software deployment, guided hardware installation or both to complement your IT staff skills and availability

Step 2: Select the options that best fit your business need

Extended end-to-end project management

Onsite deployment in remote locations

Multi-vendor networking deployment

Onsite deployment in challenging locations

Onsite deployment with special site-based protocols or requirements

Deploy Dell NativeEdge Orchestrator

Step 3: Select applications to achieve your goals

Installation of leading **third-party applications** for Edge, GenAI and more.

Proactively follow your deployments and more online!

Collaborate with our experts in TechDirect, an end-to-end management portal, to plan, track and deliver your deployment projects. Once your Dell hardware is in production, connect your Dell systems via secure connect gateway software for automated support backed by smarter AI. Expertly manage evolving priorities for support and services via our self-service portals, TechDirect and MyService360.
